

How to open zip file

Windows

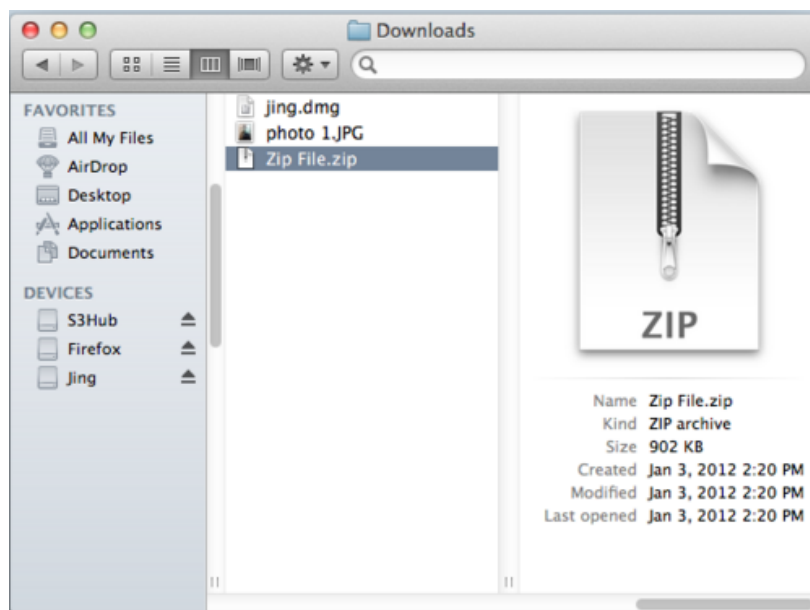

- Click the download link and save the file on your computer

- Once the download finished, locate the ZIP file on your computer
- Double-click the .zip file. This will extract the file or folder contained within the file.
Note: The original compressed files will remain within the .zip file.

Mac OSX

- Click the download link and save the file on your computer

- Once the download finished, locate the ZIP file on your computer
- **Right-click (or control+ click) the file.** Then, select "Open" from the contextual menu. Alternatively, you can just double click the .zip file.
